

DROP IN BEDLINER

VS. SPRAY ON COATINGS

Before purchasing a bedliner for your truck, consider all your options. We have listed the benefits of the **drop in bedliner system** and how it compares to the **spray on alternative**.

DROP IN BEDLINER

Unique rib design offers **superior protection** against dents & scrapes.

Up to **twice the skid resistance** of other drop in or spray on bedliners with our unique TruGrip technology.

The surface allows you to easily **rinse off the liner** without the water getting trapped and always draining away from the bed.

Our bedliner **shock absorbing technology** is 7X better than any spray on bedliner available on the market.

There is a **significant cost efficiency** when comparing drop in and spray on liners. It's the most affordable solution on the market.

DENTS & SCRATCHES

SLIP RESISTANCE

SPILL CLEAN-UP

SHOCK ABSORPTION

COST

SPRAY ON BEDLINER

The abrasive coating **does not prevent** the bed surface from dents and the liner itself can cause scratches to the cargo.

The hard coating **does not stop the cargo from sliding** in the bed of the truck.

Gasoline, oils and chemicals **cannot be easily cleaned** from the surface of the spray on bedliner.

Since the material is directly adhered to the bed of your truck, **it does not offer any shock absorption**.

One of the **most expensive** solutions on the market. It requires professional installation and is not removable.
